

What Went Well:

Successfully implemented encryption, access control to mitigate unauthorized access or data breaches. (Risk management) . Our testing coverage is always above 80%, even with new features being added every sprint. Deadlines were met properly as well, leaving time to refine and update documents properly. Also successfully had a presentation with the product owner for this sprint.

What Could Have Gone Better:

Updating all our diagrams would have been useful for not only us as it would help us manage our code even easier, but for the product owner for a better understanding and presentation of the application. We also need to have proper management to prevent financial and legal issues.

Changes for Next Sprint:

We will need to work on our diagrams and update them accordingly to each new feature or refinement we see fit. We need to strengthen our staff and management ensuring everything complies with the law.
